BRCA ELECTRIC BOARD.

BRUSHLESS MOTORS – MODIFIED and SPEC. - PRICE CAPS.

Over recent weeks the BRCA has been reviewing the economic impact on our sport and suppliers, in-light of the financial climate we are currently experiencing in UK.

With immediate effect, the BRCA Electric Board have introduced a rise in its price limits for both Modified and Spec. Brushless motors :-

The BRCA Electric Board is responding to requests from the industry to raise its price limits. After consultations, we will be raising the price limit for Spec. Brushless motors to be the same as Modified Brushless motors and all motor maximum prices will be increased to £105. Battery maximum prices will be unchanged.

The EB will also be working to develop new standards that will allow lower-cost Brushless Motors to be used by Sections at National events. The 10th Circuit 'Frontie' Class has been successful using such a motor. The EB will work to expand this area, to specify technical requirements that cost less to produce and therefore less to purchase, that could be adopted by the Electric Sections that use these products.

Paul Worsley
